

## General Information

This plugin adds two new field types mainly for use on workflow entry forms: *Vimeo Watch* and *Youtube Watch*. These fields allow you to display a video and require the user to watch a certain percentage of it before being allowed to continue.

An example use case would be for an online training where you want a user to have to complete a video, then answer some questions.

These fields are smart enough to prevent someone from just jumping to the end of the video to get credit. Because we keep track of each second that was watched, they can scrub around if they missed something and want to rewind, but they won't get credit for any parts they skip over.

## Privacy Settings

In order for your embedded videos to be viewable, you will need to pay attention to the privacy settings.

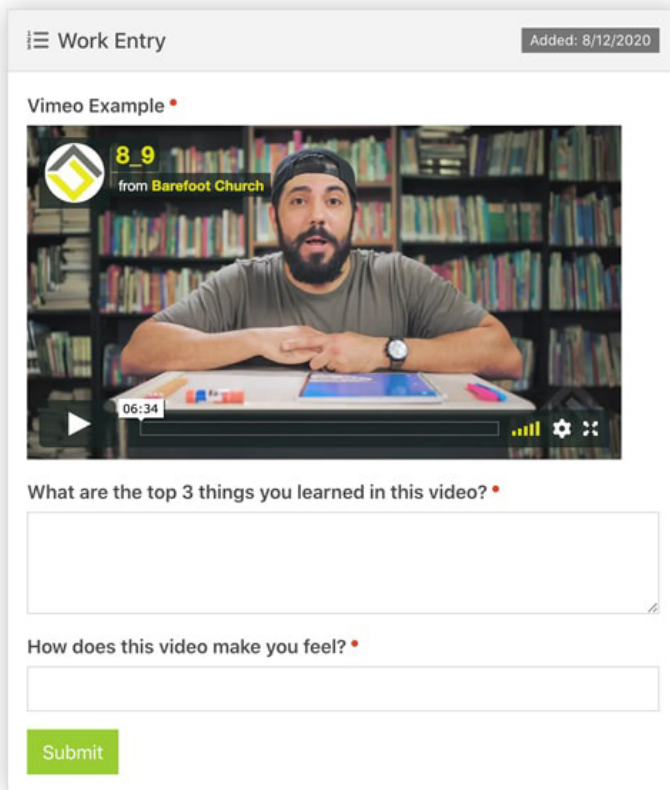

For Youtube videos, the visibility must be set to either "Public", or "Unlisted". You cannot embed a video that is marked as "Private".

For Vimeo videos, you will want to make sure that the privacy is set to "Anyone", "Hide this video from Vimeo.com", or "Only people with the private link". If you choose private link, you will need to make sure to use the private link in the field configuration.

## Support

If you run into any issues with this plugin, you can get in touch by emailing [hello@vulpinesolutions.net](mailto:hello@vulpinesolutions.net).

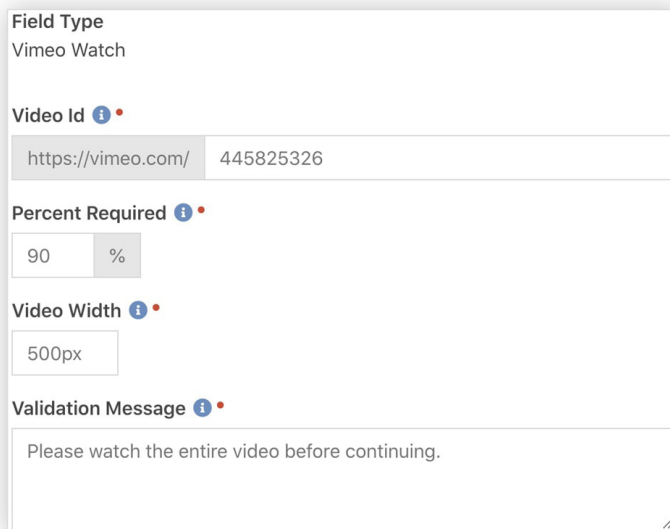

# Vimeo Watch

The screenshot shows a form titled "Work Entry" with a timestamp "Added: 8/12/2020". The form contains a video player labeled "Vimeo Example" showing a man in a library. Below the video are two text input fields: "What are the top 3 things you learned in this video?" and "How does this video make you feel?". A green "Submit" button is at the bottom.

The top screenshot is an example of a workflow form that is using a *Vimeo Watch* field along with two text fields in a typical online class format. The user will not be able to submit the form until they have watched a specified percentage of the video.

In the screenshot below, you can see the settings that were used for the *Vimeo Watch* field in this example.

The configuration settings for the "Vimeo Watch" field are as follows:

- Field Type:** Vimeo Watch
- Video Id:** <https://vimeo.com/445825326>
- Percent Required:** 90 %
- Video Width:** 500px
- Validation Message:** Please watch the entire video before continuing.

## Video Id

The video url we are displaying.

## Percent Required

The percentage of the video that the user must watch in order for it to count as “complete”.

## Video Width

The maximum width for the video player. (You can use pixels or a percent) The player is responsive, and will scale down to fit smaller screens.

## Validation Message

The message to show the user if they try to complete the form before finishing the video.
